

# MANISH U. KURSE, Ph.D.

---

<b>Contact</b>	Northridge, CA 91325, 607-229-2785, manish.kurse@gmail.com www.linkedin.com/in/manishkurse
<b>Summary</b>	<b>Research scientist and engineer</b> passionate about data driven solutions to problems of business/customer impact. With experience in academia and industry, designing and performing experiments to generate data, and using <b>machine learning, mathematical modeling and computational tools</b> to draw insightful conclusions from that data.
<b>Skills</b>	<ul style="list-style-type: none"><li>• Machine learning, data analysis, statistics, mathematical modeling, optimization</li><li>• Designing and running experiments to collect data (engineering bench-top, preclinical studies)</li><li>• Communication of results to business leaders, regulatory agencies and research community</li><li>• Programming: Matlab, C/C++, Python, SQL</li></ul>
<b>Education</b>	<div><div><i>University of Southern California</i>, Los Angeles, CA <b>Ph.D. and M.S.</b>, Biomedical Engineering, GPA: 3.96/4.0 <i>Dissertation: Inference of computational models of tendon networks via sparse experimentation.</i></div><div><i>Cornell University</i>, Ithaca, NY Graduate course work, Mechanical Engineering, GPA: 4.03/4.0</div><div><i>Indian Institute of Technology (IIT) Madras</i>, Chennai, India Bachelor of Technology, Mechanical Engineering GPA: 9.08/10.0</div></div>
<b>Work Experience</b>	<div><div><i>Research Assistant, University of Southern California</i> Developed data-driven models of the human finger from experimental data and demonstrated that these models were more accurate representations of the anatomy than those obtained from conventional modeling techniques in biomechanics. <b>Machine learning:</b><ul style="list-style-type: none"><li>• Implemented gradient based heuristic optimization algorithms in Matlab to infer models of the human finger from an experimental dataset consisting of input tendon forces and resulting fingertip force output.</li><li>• Programmed these algorithms to run on parallel processors using Matlab Parallel Computing Toolbox and Distributed Computing Server on the USC cluster.</li><li>• Implemented symbolic regression using Eureqa to determine analytical functions defining finger movement from an experimental dataset collected using human cadaveric fingers.</li></ul><b>Mathematical modeling:</b><ul style="list-style-type: none"><li>• Developed a novel non-linear finite element method (FEM) simulation environment in C++ and Matlab to model the mechanics of elastic tendon networks (Evaluation of the cost function).</li></ul><b>Experimental data gathering:</b><ul style="list-style-type: none"><li>• Designed experiments to gather force and motion data from computer-controlled actuation of the tendons of 11 human cadaveric hands.</li></ul></div><div>2007-2012</div></div>

	<b>Senior R&amp;D Engineer, Boston Scientific Neuromodulation, Valencia, CA</b>		<b>2012-present</b>
	Boston Scientific is one of the largest medical device companies in the United States.		
	<ul style="list-style-type: none"> <li>• Played a key role in obtaining ImageReady™ Head-Only MRI labeling for the Precision Spectra™ Spinal Cord Stimulation system, Boston Scientific's first MRI conditional neuromodulation system in the US that was critical for Boston Scientific to meet competition in the Neuromodulation market. <ul style="list-style-type: none"> <li>– Determined thresholds of clinical safety based on literature study and mathematical analysis.</li> <li>– Provided technical support for regulatory submission and participated in subsequent conversations with the US Food and Drug Administration (FDA) enabling smooth approval of the submission.</li> </ul> </li> <li>• Executed pre-clinical studies to collect biological data on which I performed statistical analyses to define a patient safety threshold for MRI conditional neuromodulation systems.</li> <li>• Successfully defined strategy and test methods to determine MRI safety of active implantable systems. This strategy is now being used across different projects to design new MRI conditional systems.</li> <li>• Designed experiments and performed data analysis to obtain mathematical model that predicts behavior of system in MRI.</li> </ul>		
	<b>Intern Research Consultant, Deallus Inc., Los Angeles, CA</b>		<b>2011</b>
	<i>Deallus is a startup that provides strategy and competitive intelligence consulting services to clients in the pharmaceutical and biotechnology industry.</i>		
	<ul style="list-style-type: none"> <li>• Conducted research to gather competitive intelligence in new drug/diagnostic development and commercialization.</li> <li>• Analyzed data and presented key findings to clients from the biotechnology-pharmaceutical industry aiding them in strategy development and decision-making.</li> </ul>		
<b>Projects/ Courses</b>	<ul style="list-style-type: none"> <li>• Machine learning (USC), Applied Mathematics I and II (Cornell), Statistics (USC), Advanced Dynamics (USC), Linear Control Systems (USC), Non-linear Dynamics (USC)</li> <li>• Self taught: SQL (Stanford Online), Machine Learning (Andrew Ng, Coursera)</li> </ul>		
<b>Honors/ Awards</b>	<b>Knowledge Driven Product Development (KDPD) Award</b> , Boston Scientific 2013 <b>Meaningful Innovation Award</b> , Boston Scientific 2013 <b>Checkered Flag Award</b> , Boston Scientific (awarded for going above and beyond to make a difference to a program supporting company goals) 2012, 2013 <b>Olin Fellowship</b> for graduate study, <b>Cornell University</b> 2006
